TECHNICAL PROJECTS

bulletin_board [CODE](#)

When users want to share public messages they will use a bulletin board but if they are in different countries they can use a bulletin board website to share their posts and comment on others' posts or upvote posts.

- + Environment: [HTML, CSS, JavaScript, Node.js, EJS, Ajax, Express, SQLite] .
- + I have worked on adding the (change password) feature on the profile page.
- + Use format: using Express Generator to quickly start and develop express js web applications very easily.

Find Yours [CODE](#) | [DEMO](#)

When users lost their valuable item and can't find it they can use the Find Yours web application to find their lost items by submitting a post for lost items and also users who have found an item can submit a post for found items to find the owner.

- + Environment: [HTML, CSS, JavaScript Library (React.js), FireBase].
- + Working on the UI creating (profile) page, (post section) in home page, (not found) page and getting data from firebase storage for a specific user also adding routers.
